I am performing a HUD NEPA assessment and need data sufficient to complete the HUD Noise Calculation for three railways. The nearest crossing by DOT Crossing Inventory Number are:

- 608826X
- 867193X
- 174498E

I specifically need to know the following about each location:

- Average train speed
- Average engines per train
- Average railway cars per train
- Average Train Operations
- Night fraction of Average Train Operations
- Are Railway Whistles or Horns used at this location
- Are the Tracks Bolted at this location

Each of the above need to be separated by Electric and Diesel.

Please refer to the attached example image for reference. The HUD Noise calculator can also be found online at: <https://www.hudexchange.info/programs/environmental-review/dnl-calculator/>

I perform about 10-12 such studies per year. If there is a publicly available source for this data, please let me know. I currently use the FRA Office of Safety Analysis Safety Query website. However that only gets me a small portion of the required data.

Thank you,
Bob
